

ABSTRACT

A locker system is capable of surely securing an available locker upon following necessary procedures for concluding a contract of utilization reservations
5 of a home delivery locker as an address-for-delivery of a parcel or merchandise. The locker system includes a plurality of lockers having predetermined operating means, a control center for consolidating the plurality of lockers, a delivery trader for delivering parcels to
10 predetermined places according to predetermined transportation measures, and a user terminal possessed by the user. The plurality of lockers, the control center, and the user terminal are connected via a communication line. A parcel stored in an arbitrary
15 locker from among the plurality of lockers is made to be delivered for an address-for-delivery specified by the user. The user selects any one of the plurality of lockers as an address-for-delivery of the parcel which the user desires to deliver and the user can reserve the
20 selected locker.
